

## Overview

One challenge that social leaders face is that technology solutions that could advance their work is financially out of reach. For one thing, good solutions take a lot of time and energy to design. Also, IT experts are expensive to employ. And finally, the market-driven sector does not always provide solutions that are a perfect fit for work in the social sector.

Northbridge meets this challenge head on!

Through our Caucus Tracks, we bring together social justice leaders who are working on similar problems. We help these leaders pool their expertise, together imagining technology solutions that could raise productivity for all of them. Then, with the help of skilled and passionate technology volunteers, Northbridge builds solutions that advance our members social justice goals.

## For Example...

Imagine that several Northbridge members are working independently on urban community development, with each group separately looking for ways to help their constituents organize activities in their neighborhoods. In Caucus Track sessions facilitated by Northbridge, these community leaders will be able to design a technology solution (for instance, a messaging or communication solution) that boosts all of their impacts in their own neighborhoods.

## Caucus Tracks

Participation in these two tracks are organized by interest and membership level. Participation details and scheduling are provided with membership materials.

### Caucus Tracks

#### Track 1

Focused on improving the member-owned Nexus software suite.

#### Track 2

Focused on innovating new solutions for your community.

## How Do I Become a Northbridge Member?

Northbridge Technology Alliance membership is available to charitable organizations who are engaged in social justice and community-building efforts. See our web site under [Membership](#)<sup>1</sup> for complete details.
